

Partners in excellence

## Grupo Tragsa

The Tragsa Group consists of a cluster of state-owned companies that forms part of the Sociedad Estatal de Participaciones Industriales (SEPI – the State Society of Industrial Participations). With almost four decades in the business, it is a comprehensive supplier of services and a benchmark company for Spanish government bodies in the actions enforcement.

These 200,000 actions in different fields of activity on both, a national and international level, are precisely which constitutes the experience that makes the Tragsa Group stand out. Its performance is also proof of the group's capacity to adapt and respond quickly and accurately where required; strengths that are complemented by its R&D capabilities. The results come in the shape of solutions that use the very latest technology and provide the highest quality services.

If you can imagine it,  
the Tragsa Group  
can do it for you

# Areas of Activity

## Building and architecture

Here we should highlight the comprehensive work of the Tragsa Group as regards town and land planning, with the application of the sustainability and energy-efficiency criteria it specialises in. The group handles studies and projects, as well as performing work related to industrial, commercial and warehouse activity, or for social, cultural and office use, not forgetting public or recreational use and everything related to heritage and the interpretation of natural and cultural environments.

## Water

For the Tragsa Group, water management is only acceptable if it includes the concept of 'quality'. The group applies quality to all areas of the planning, design and construction of facilities for the management of over-ground or underground water, whether it is soil water or interlinked natural resources, applying the most innovative technologies in control systems for infrastructures, and storage and treatment facilities, as well as for irrigation and information systems.

## Infrastructures

The Tragsa Group is able to draw on all the advantages afforded by its position as a large value-added infrastructure construction company to provide sustainable planning. From studies and projects to land, air and sea communication work, the Tragsa Group focuses on the profitable sustainability of both public and private commissions.

## Environment

Fighting and prevention. More than our words, it is our concepts that define the Tragsa Group's care of the environment. It is the fight against erosion, forest fires, marine pollution, and the over-use of resources, as well as the use of prevention mechanisms to minimise all these, and the destructive effects they have on the environment, by employing highly-specialised human and technical resources. Solutions for everything related to forestry, forest management, land and marine wildlife, biodiversity, improvements, the conservation and recovery of natural areas, and forest hydrological correction, among others, bear the Tragsa Group name.

## Services

### | Livestock farming, fishing and food | Operation

Constantly seeking excellence with regards to livestock farming, forestry and fishing, as well as the maintenance and management of waste-treatment resources and services, the Tragsa Group believes in going that extra mile, promoting training, communication and environmental education. Together, these make up the foundations for all its specialisations.

## Healthcare

Public health services, including health and safety and nutrition services, are priorities for the Tragsa Group. It works in the fields of animal, forest and plant health, and its activity spans everything from monitoring plagues to training field inspectors and developing data management software. It is also involved in food safety, providing traceability controls and food risk assessments.

## Studies, technical support and consultancy

Through its subsidiary company Tragsatec, the Tragsa group is a qualified consultant providing consultancy services, as well as creating and setting up advanced software solutions to meet a wide range of needs, such as the implementation of e-Administration (data-base creation and management, telematics and online customer services), the comprehensive management and control of livestock and fish farms, geographic information systems (GIS) and the help they provide, and environmental, social or property planning alerts or actions.

## Emergencies

The Tragsa Group is involved in the design and development of comprehensive emergency, evacuation and civil protection plans, and provides the material and human resources required to ensure an immediate response to situations of imminent danger, or of damages likely to cause social alarm or that are a threat to the environment or the population. Thanks to its proven track record in emergency management, the Tragsa Group is part of the EU Civil Protection Mechanism.
